

and Human Security

IPRA Congress, Sydney, 6-10 of July, 2010

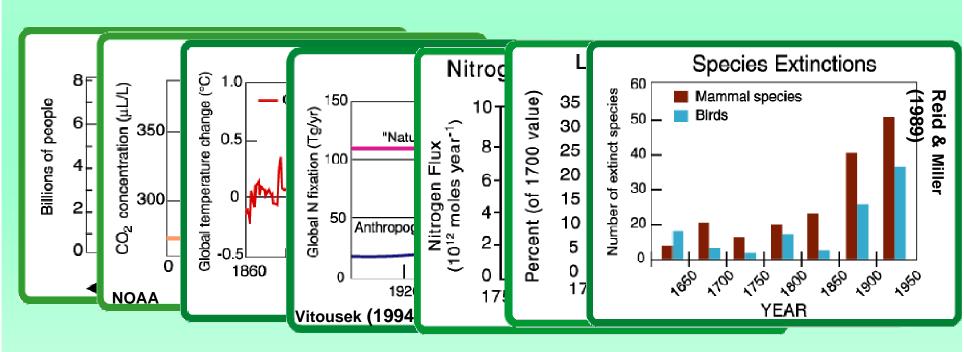

Index

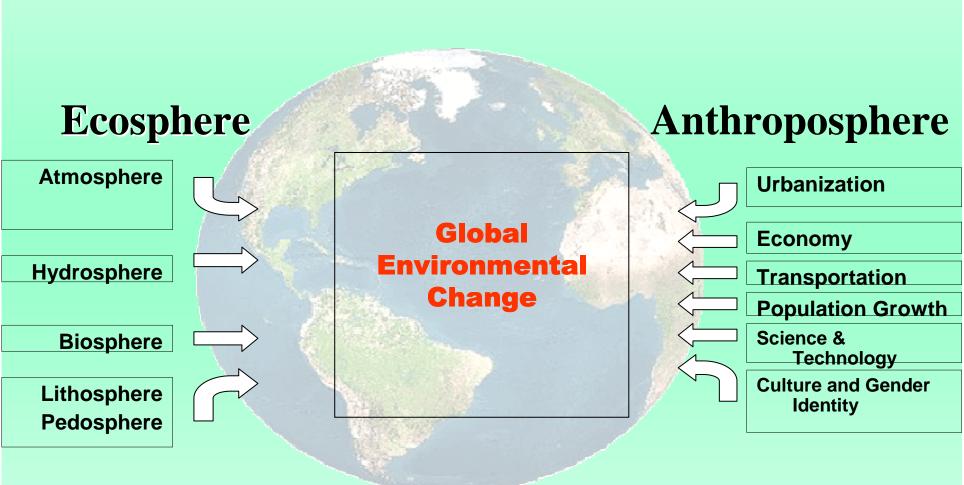

- 1. What is iglobal environmental change: globalization and climate change?
- 2. What is sustainable peace
- 3. What do we mean with "security"
- 4. Is GEC a security risk: the PEISOR model?
- 5. How to securitize human, gender and environment?
- 6. Climate change and disasters
- 7. Drought, desertification, violence and migration by a
- 8. Mitigation, adaptation, resilience and Arsocial vulnerability
- 9. Future scenarios and policy

1. What is Global Environmental Change?

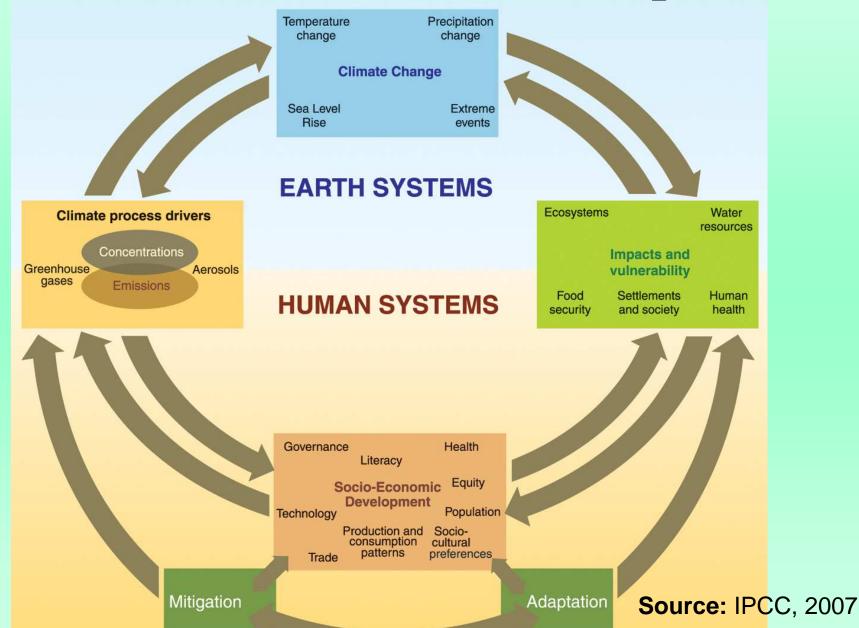

- GEC is more than climate change
- Includes natural **plus** human components
- It is a constelation of changes in different spheres, such as:

GEC and Security

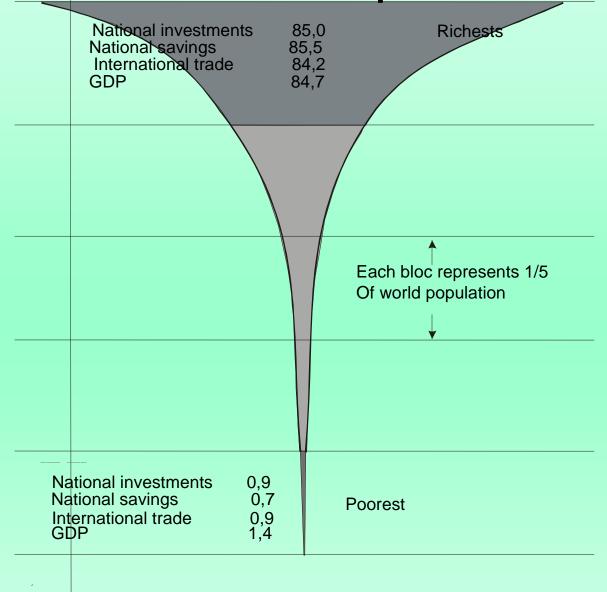

GEC: Earth and Human Systems

Globalization

- 1. Global financial networks
- 2. Instant communication (internet)
- 3. Global trade system
- Global multilateral system of negotiation within the UN and the UN Security Council
- 5. Global agreements on human rights and its reinforcement
- 6. International Council of Justice
- 7. Consolidation of democratic political systems
- Increase of social gaps within countries and between North and South

Globalization created unequal access to goods and crises

Outcomes of globalization and GEC

- 1. Economic crisis: most severe financial crisis since 1929 (collapse of private banks, insurance companies and enterprises), reduction of economic growth, increased unemployment and decline of remittances from migrants.
- 2. Population Growth: The world population has tripled during the 20th century from 2 to 6 billion and it is projected to **grow to 9** billion until 2050.
- 3. Climate Change: global temperature is projected to rise between 1.1 and 6.4℃ by 2100; sea-level between 18 cm and 2.4 metres; precipitation patterns change significantly, climate related hazards will increase in number and intensity affecting more people and economies.
- 4. Water Security: during the 20th century population tripled and water consumption increased six fold. By 2025, more than 2.8 billion people in 48 countries are projected to face water stress, most of them in Asia and Africa.
- 5. Food Crises in 2009: more than one billion people are hungry; 68 million more due to food price increase; more than 24,000 people die daily due to hunger-related causes

Produce regressive globalization

- Strategy of groups and governments that favor a globalization only to benefit themselves
- Administrative unilateralism makes use of global strategies of pre-emption and counter-proliferation in a clearly expression of national interest. This could create isolationism and an anarchic global system of governance.
- The rise of nationalistic and religious fundamentalist groups, which spawned a new geopolitical terrorism. This new groups are depend on global infrastructure such as internet, global funding and financial system, communication, propaganda and technology.

2. What is Sustainable Peace?

- It is a generally accepted value, a type of desideratum linked to harmony, tranquility, cooperation, alliance, well-being, and agreement.
- It started with 'preventive diplomacy' from Dag Hammarskjold, later adopted by Boutros Boutros-Ghali, and today used in different governmental discourses and practices: tries in a preventive way to avoid escalation and spreading of conflicts through political solutions.
- The Orient contributed nonviolent practices with other humans and nature: ahimsa signifies not to do harm to any living organism.
- China's Taoism proposed a harmony among sky, earth, and humans generating cosmic energy which is the way to intelligence and fruitful life (Kongfuzi).
- In Mesoamerica indigenous societies, living in difficult environmental conditions, have developed equilibrium, deep respect and unity with nature and a profound knowledge on environment management
- Dark history of gender discrimination, intra-familial violence, feminicides, rape, trafficking and aggression have created higher vulnerability of women. UN Security Council Resolution 1325 that reinforced the ongoing gender mainstreaming in the UN bodies, highlighted the crucial role of women in development.

Critics to sustainable peace

- underlies a hierarchical present world order, where international institutions and patriarchal organizations are maintaining the status quo of the present exclusive globalization process.
- no structural changes are proposed
- conflicts are required to offer the superpower and its allies' cheap raw materials for consumerism and wasteful fossil energy use.
- ideologically false realities: cheating system of free-market and global trade: world elite get richer using legal and transnational organized crime to amplify their accumulation of capital and power
- South: sustainable peace implies critics of the existing model of exclusivity and violence.
- new elements to create a sustainable model of society with less environmental destruction, resource efficiency and shared use of science and technology (against TRIPS and GATS)
- promotes reduction of global environmental change, poverty alleviation and self-reliance: a new paradigm of security: Human, Gender and Environmental Security: HUGE

3. What is security?

- > Security (Lat.: 'securus', 'securitas', 'se cura'
- philosophical and psychological state of mind
- > subjective feeling of freedom from sorrow.
- > Political concept of 'Pax Romana': stability in era of Augustus.
- > Western thinking 'security' synonymous: 'certitudo'; certainty
- > Since Augustus, and Middle Ages, 'securitas' was linked with 'pax' & 'libertas' that was associated with 'quietness'.
- > 19th century, state is key security institution governed by law.
- > 20th century, security associated with preventing internal & external dangers; police & courts (internal: justice & home affairs) & political, economic, military measures (external: security/defense).
- > a general 'societal idea of value', a universally **normative concept**, different meanings in affirmative manner.
- > political value, related to individual or societal value systems

Objective, Subjective, Intersubjective Security

- Wolfers (1962) pointed to two sides of the security concept: "Security, in an objective sense, measures the absence of threats to acquired values, in a subjective sense, the absence of fear that such values will be attacked".
- From a constructivist approach in international relations 'security' is the outcome of a process of social & political interaction where social values & norms, collective identities & cultural traditions are essential. Security: intersubjective or "what actors make of it".
- Copenhagen school: security as a "speech act", "where a securitizing actor designates a threat to a specified reference object and declares an existential threat implying a right to use extraordinary means to fend it off".
- Such a process of "securitization" is successful when the construction of an "existential threat" by a policy maker is socially accepted and where "survival" against existential threats is crucial

4. Is GEC a security risk? PEISOR Model

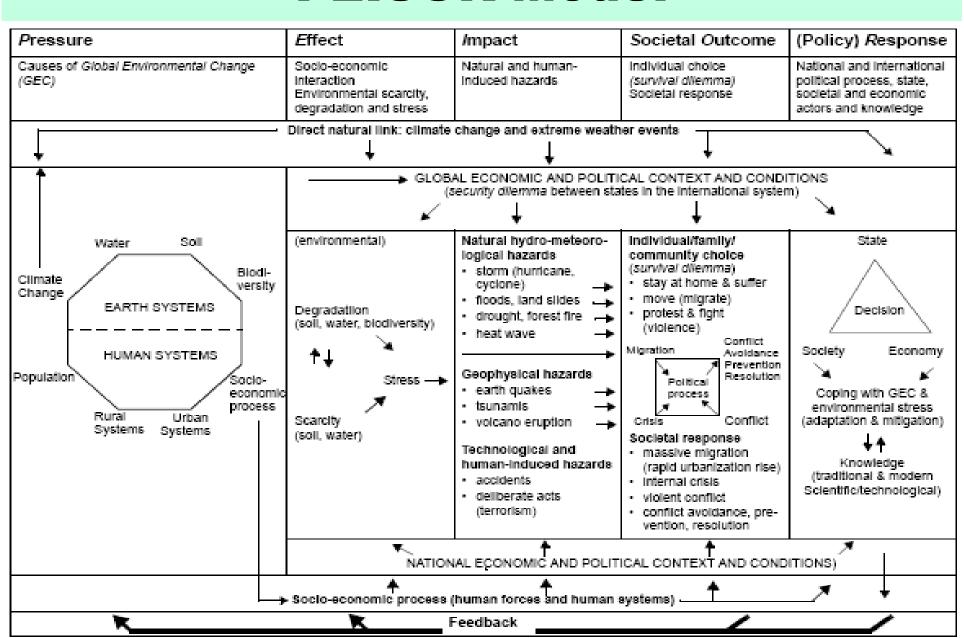

• PEISOR: Result of pressure and response models and of debates on environmental security and on natural hazards.

The PEISOR model combines five stages:

- P (pressure) refers to 6-8 drivers of global environmental change
- Eto the effects of the linear, non-linear or chaotic interactions within the 'hexagon' on environmental scarcity, degradation, and stress;
- I to extreme or fatal impacts of human-induced and climate-related natural hazards (storms, flash floods, flooding, landslides, drought);
- SO to societal outcomes: internal displacement, migration, urbanization, crises, conflicts, state failure, and
- R to response by society, business community, state where both traditional & modern technological knowledge can make a difference.

Hazards cannot be prevented, their impact in terms of deaths, affected people, economic & insured damages can be reduced by policies & measures that link protection with empowerment of the people to become more resilient.

PEISOR Model

P: Pressure: Interactions of GEC

Reduced carbon sequestration above & below grand carbon reserves

CLIMATE CHANGE

global temperature increase climate variability

extreme weather events

reduced carbon reserves & increaased CO2 Desertification
Land Degradation
& Drought

decreased land & soil organism' species diversity

mining activities

land use change

urbanization reduced soil in drylands conservation

land degradation

Reduced primary

production & nutrient

cycling

soil erosion

compactation of soils

plant diseases

& resistance

fauna loss

1

water erosion

decrease in organic matters in soils BIODIVERSITY LOSS

salinization sodification

droughts

aguifer depletion

lack of water and food

change in community structure & ethnic diversity

poor irrigation

watershed degratation

accumulation of toxic substance

increase of in water & soil social vulnerability, poverty

sea level rise

pollution

rainfall variability

gender vulnerability & survival strategies migration urbanization slums

forest fires

land slides

hydro meteorological disasters

WATER STRESS

5. How to securitize HUGE

- Human, Gender and Environmental Security (HUGE) combines a wide gender concept (vulnerable: including children, elders, indigenous and other vulnerable groups) with a human-centered focus on environmental security and peace challenges.
- HUGE analyzes the patriarchal, violent and exclusive structures within the family and society questioning the existing process of social representation-building and traditional role assignation between genders. HUGE asks for the obstacles to overcome the consolidated discrimination of women and poor, but also narrow feminist approaches of male-female opposition.
- HUGE's 'human security' includes equity, development and conflict resolution through social organization, specific governmental policies, private ethical investments and legal reinforcements by stimulating socio-political participation of women, young, elders and marginal.
- At the international level HUGE analyses the potential of free and equal access to world and regional markets and the limits due to existing trade distortions.
- HUGE revises the obstacles for world solidarity to support poor countries with financial aid, technology and debt relief.

- HUGE includes a healthy environment, integral management of natural resources, prevention and remediation practices to reduce vulnerability and to stimulate resilience-building through bottom-up organization combined with top-down policies and institution-building.
- Nonviolent conflict resolution is central for personal and social identity in a world where processes of unification and diversification are occurring quicker than ever.
- HUGE includes consolidation of participatory democracy and governance, promoting conflict prevention, nonviolent conflict resolution and peacebuilding: a 'huge' solidarity process of sustainable, inclusive, just and equal development.

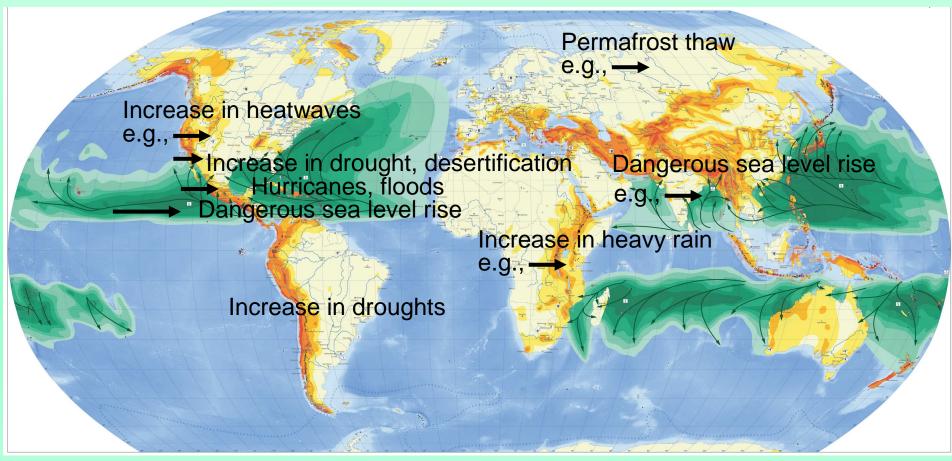

Human, Gender, Environmental Security

Determina- tion Which security?	Reference object: Security of whom?	Value at risk: Security of what?	Source(s) of threat: Security from whom or what?	
National security	The State	Territorial integrity	State, substate actors	
Human security	Individual, humankind	Survival of humankind people	Natural events, state, globalization	
Environmental security	Ecosystems, rural and urban systems,	Sustainability	Humankind, natural events	

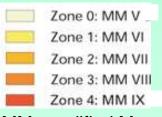

water and food **Gender security** Equity, identity, Patriarchy, totalitarian **Gender relations**,

indigenous people, social relations, institutions (élites, minorities governments, religious solidarity, fundamentalism, tolerance, dominant cultures), culture intolerance, violence

Climate Threats, Disasters and Impacts

Earthquakes

MM: modified Mercalli scale

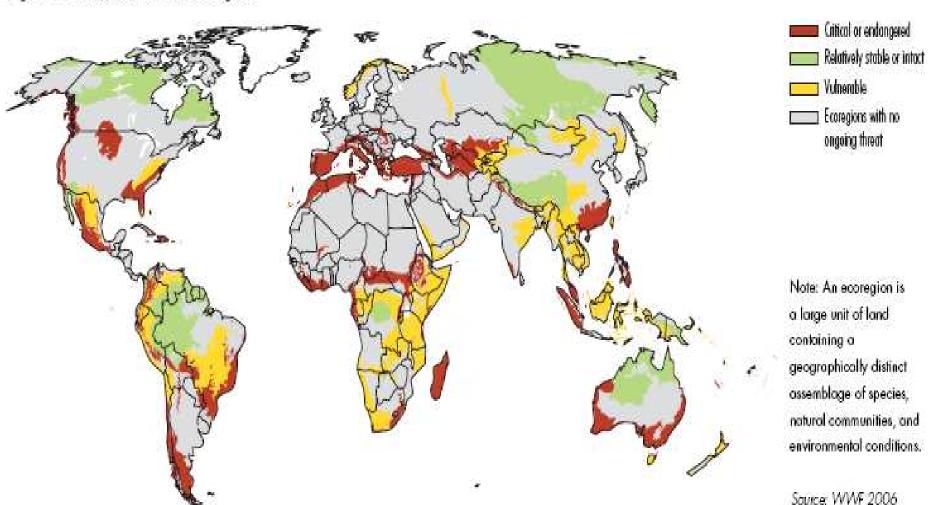

Tropical Hurricanes

Threatened Ecosystems

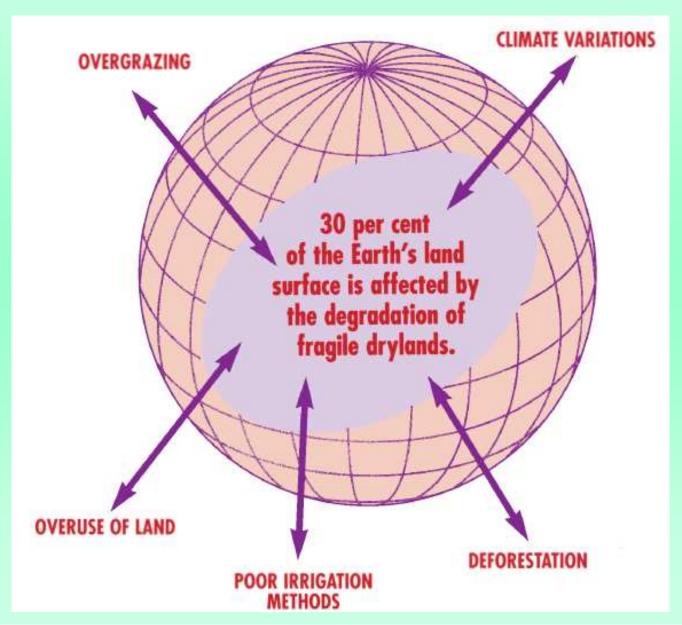

Figure 5.1 Status of terrestrial ecoregions

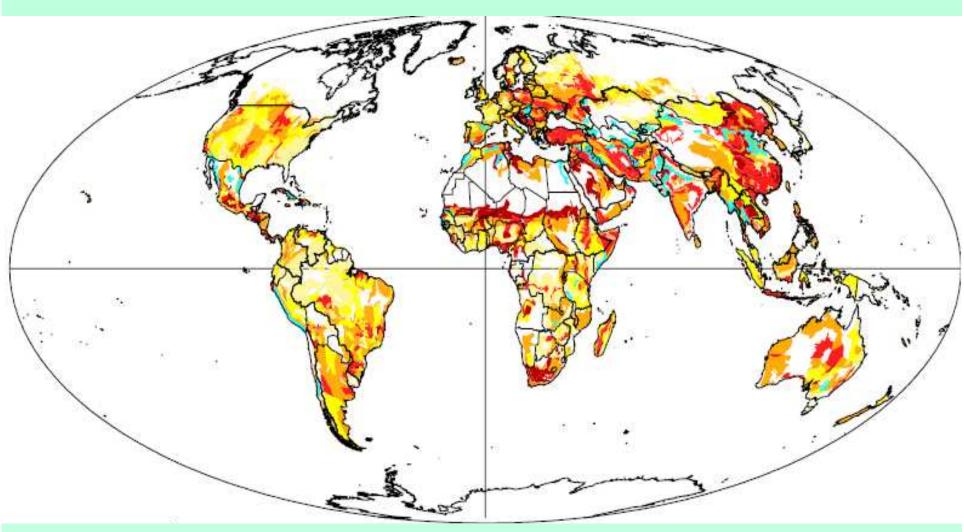

Desertification, erosion, land degradation

- 110 countries are potentially at risk. UNEP estimates that desertification costs the world US\$ 42 billion/year. Africa alone looses some US\$ 9 billion/year (Lean 2008: 10). The continent with the highest proportion of severely or moderately desertified drylands is North America (74%), but also 13 European countries suffer from desertification.
- 30% of the earth is deteriorated due to overgrazing, overuse of land, poor irrigation methods, deforestation, urbanization, climate variability and change, human-induced increase in food, water and soil due to population growth, modernization processes, livelihood changes and waste.
- Loss of yield productivity, water and food scarcity, inadequate land management and poverty are key drivers of forced migration of people from drylands to humid regions where new desertification trends surge from an increased demand on the carrying capacity of the land.

Key factors of drylands' degradation

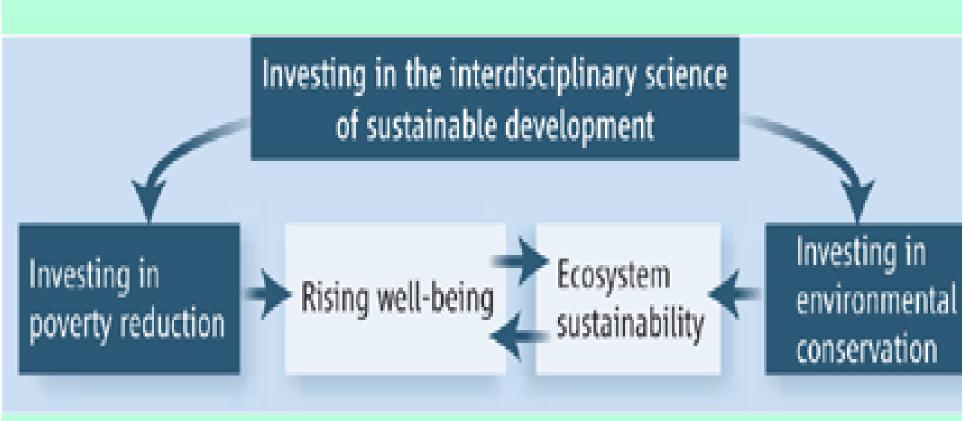

Global soil degradation (% of affected area)

Integral policy: poverty alleviation and environmental recovery

Environmental, water and food security?

Ecosystem Services and Well-being

CONSTITUENTS OF WELL-BEING

Security

- PERSONAL SAFETY
- SECURE RESOURCE ACCESS
- SECURITY FROM DISASTERS

Basic material for good life

- ADEQUATE LIVELIHOODS
- SUFFICIENT NUTRITIOUS FOOD
- SHELTER
- ACCESS TO GOODS

Health

- STRENGTH
- FEELING WELL
- ACCESS TO CLEAN AIR
 AND WATER

Good social relations

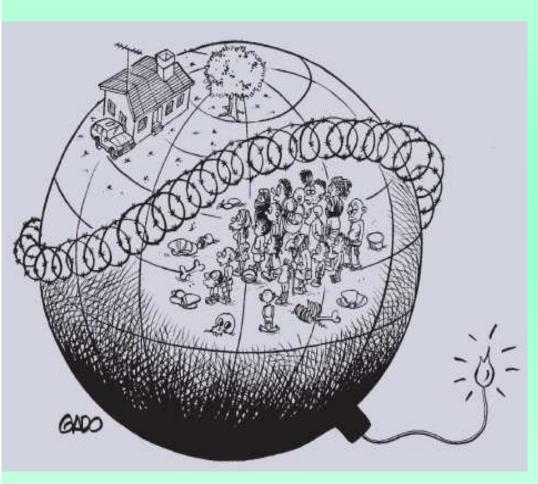

- SOCIAL COHESION
- MUTUAL RESPECT
- **ABILITY TO HELP OTHERS**

Freedom of choice and action

OPPORTUNITY TO BE ABLE TO ACHIEVE WHAT AN INDIVIDUAL VALUES DOING AND BEING

Source: Millennium Ecosystem Assessmen

Future scenarios and policy

1) cooperation with solidarity vs. isolationism and elite behaviour; 2) cultural diversity vs. economic monopoly; 3) peace with ahimsa vs. himsa; and violence; 4) spirituality vs. secularity.

Conflictive Situation: Widening, Deepen ing & Sectorialization of Security Threats Vulnerabilities & Risks Challenges,

trafficking

Regional peace, sustainable development, participative governance

- medium and long-term problems related to security and co-operation in the region;
- improvement of regional capacity and mechanisms to prevent, manage and resolve crises through political and not military means;
- creation of development & democratic institutions with representative governments and protection of human rights, social rights and fundamental freedoms;
- sustainable growth and poverty alleviation with direct involvement of women.

Ecofeminism

- Ecofeminism promoted sustainable subsistence in hand of women for food and wealth of their families, communities and the planet
- non-violent management of nature and society
- peaceful and nonviolent conflict resolving society
- confronted with globalization and rape capitalism, organized crime and depletion of nature, ecofeminism allied to other social movements for an inclusive peace behaviour in daily life (Reardon 1996; Boulding 2000; Oswald 1990; Campos 1995).

FROM VIOLENCE TO NONVIOLENCE

FROM PATRIARCHY TO PARTNERSHIPS **OF SOLIDARITY AND SUSTAINABILITY**
